Results

- Employees with less worked years have more probabilities to leave the company than employees with more years worked.
- 57% of employees from 18 to 20 years old leaved the company last year.
- 29% of employees from 21 to 25 years old leaved the company las year
- Human Resources department has problems, Are they hiring under the right profile? Are they hiring on time?
- We can see more turnover on 4 rated employees in Job Involvement than those who got 1.
- We can also see that the highest percentage of turnover is in those employees who had the highest salary increasing. Why are they increasing 25% their salary and leaving the company?
- Those employees with 1 year with their current manager tend to leave more than those with more. This is particularly interesting assuming that 14% (42) of the managers leaved the company last year.
- Single employees are 26% prone to leave the company.

RecommenData

- **Collect more information of 18-29 age employees.**
- **Pay special attention to single employees to understand better the reasons why they are leaving.**
- **If experience is needed, more than two previous Jobs.**
- **Review Human Resources work conditions and people management.**
- **Develop programs to retain talent.**

Future Work

- **Are the employees leaving the company or getting fired? Does the company save the employee's resignation reasons?**
- **Determine the cost of internal/external trainings and why some employees have 1 and others 6.**
- **When an employee leaves, the company needs to know why. If is going to a better position we can assume that we are losing talent.**
- **Is the salary increasing the only incentive that the company offers to employees to stay?**
- **It would be great to have some business results.**

Thanks!
